	Nematoda	Trematoda	Cestoda
Bentuk	Silindris, tidak bersegmen	Pipih seperti daun, tidak bersegmen	Pipih seperti pita, bersegmen
Kelamin	Terpisah (dieocious)	Hermafrodit, kecuali Schistosoma	Hermafrodit
Kepala	Tanpa batil isap atau kait. Mempunyai buccal capsule pada beberapa spesies	Batil isap, tanpa kait	Batil-isap+ kait-kait
Saluran pencernaan	Ada, lengkap, anus ada	Ada, tidak lengkap, anus buntu	Tidak ada
Rongga badan	ada	Tidak ada	Tidak ada

Morfologi Telur

Anopheles	Culex	Aedes
Berbentuk perahu dengan pelampung di kedua sisinya	Lonjong seperti peluru senapan	Lonjong seperti telur
Satu per satu di permukaan air	Beroperkulum seperti rakit saling melekat	Diletakan satu per satu di atas air
		

Morfologi nyamuk mansonia sp. Morfologi nyamuk mansonia pdf.

2) Driving around the fish pond using bait. 2. The characteristics of the mosquitoes of Mansonia are the following: a. Breathing Funnis such as thorns (pupa phase) 5. 3. Mosquitoes can live in almost all types of water, from the melting of cold water to dirty residual water. After the sample is packed and labeled, and it is not forgotten to receive an air orifier (points) in the sample glass. Winged wing scales and thus trica. and. Between different, but rarely exceed 15 mm in length. (5) Image of mansonia mosquito stages: characteristic eggs - eggs - dark brown, under the surface of leaves or plants, in the form of a spindle, stabbed, shaped, column to facilitate installation Of plants and arranged in rosette shape. ç. We hope that the reader can know and understand about taxonomy, the life cycle of mosquitoes of Mansonia and the role of mosquitoes of Mansonia in the health sector, so that they can avoid filariase worm vectors and can prevent and control mosquitoes of Mansonia, to improve the degree of pill. Mosquitoes are a spring of arthrion that act as viral disease vectors born in the arthrion. Characteristics of Mansonia mosquito larvae 1. General objective to find out about the mosquitoes mansonia. Mosquitoed mosquitoes are captured using inspiration. When it does not form a 90th of 90° 2. 5) after the mosquito is labeled. The entrance brought to the laboratory. d. Work Procedure (8) 2) Taking larvae in a fish pond that has been maintained and allows the presence of mansonia mosquito larvae using dipper. Wing shape thus trica. (1) BAB I Pendahuluan A. H. Cara Pengambilan Sampel Nyamuk Mansonia 1. Vektor Penyakit Yang Dibawa Oleh Mansonia Yang Paling Sering Dimedi Adialah Filariasis (Vektor Penyakit Cacing). The bottom of living beings survives in a dependent, including mosquitoes whose are looking for food in the form Humans and carry germs through mosquitoes (vectors). Infected blood and containing larvae and will be transmitted to others when infected mosquitoes bite or suck the person's blood. In the Torão, there is a spine Sdoot. Form of siphon as horns how do you take a sample of mosquito meek? The Role of Mansonia Mosquitoes in the Health Field of Mansonia Mosquitoes Plays An Important Rolling A A Dysurbing, Namely its Anthropophilic, Night, Exofagic Nature, Dysurbing Sleep or Human Activities Outside The Home at Night and Also As A Filariasis Vector: Malay Filariasis, Caused By Brugia Malayi. If the fish farm is not maintained, it should be closed using a tent/canvas, à € ·à € to ensure the absence of larvae (7) mosquitoes that develop in the water and their eggs are sticky in plants in the fish agricolas. Mansonia mosquito larvae sampling a. Characteristics of Mansonia Mosquitoes 1. C. After the sample is packed and labeled, and it is not forgotten to receive an air orifier (points) in the sample glass. The pupa of trumpet are hard and strong to pierce the plants of the plants. You are reading a free view, the pages 7 to 15 are not shown in this view. Leading the night at night from 08:00 - ended. How to prevent and control the mosquito vectors of Mansonia: a. To find out how to sample the mosquitoes of mansonia b. B. The larvae so a short chiffon · chiffon sharp, irregular at the end F. Chapter III closing A. G. 3) Prison is made sitting by the files to be rolled up to the knee limit. Provide first. Mosquito Mosquito Mosquito Mosquito Mosquito Mosquitoes live in nights, located in forest and endemal panthuses, dirty environment and non -fish farms used. B. 4) Driving the night at night, starting at 08:00 - finished. Significantly, all mosquitoes must have water to complete their life cycle. Mosquito mosquito mosquito mosquito mosquito are as follows: A A · Kingdom: Animalalia à A · Filum: Arthropods à A · Class: Inertia instruments A · Order: Diptera · Genus: Mansonia and · Usually located at the surface of the aquatic plants 3. Causes Filariasis (4) d. l. Mansonia mosquito larvae linked to the grids of the Aquatic plants. Spectable objectives a. You can download the paper by clicking on the top buton above. If the house in the endemic environment is 3m and install the gauze wire around the window ventilation and use a diminishing in a poose area. The eggs are placed together to form a ferry under the surface of the leaves of aquatic plants 2. These names are used to descriptive ways, so that the name represents certain mosquitoes. B. (10) Referentials (accessed Friday, 25 of Marã 2016 à s 13:00 waw) http: // arrangement. Blogspot.com/2013/ 04/papers-pararaSitology Mosquito.html (accessed Friday, 25 of Marã à s 13:00 Wita) Mantonia.html (11) http: // lab- anaks. blogspot.com/2013/04/Underfund-yamuk-seh-um.html (accessed Samado, 26 of Marã à S 09:00 Wita) mansonia. The HTML Tã*M Ganchos larvae (SAW) to take O2 respiration nipples 3. The mosquitoes were two scams, slender body and six long legs. 4. Adult, Hande Hair (Bristel) in front of the Spiacle Hind with 3-5 regular bracelets the wing veins are equipped with extensive wing scale, so dark and shiny. There are more than 2500 different mosquito sings around the world, each spinning has a Latin scientific name, such as Culex Tarsalis, Aedes aegypti, etc. Filariasis is a disease caused by the types of nematons of Wucucereria Bancrofti, Brugia Malayi and Brugia Timori. You are reading a free view, the pages 20 to 25 are not shown in this view. How to control adult mosquitoes and larvae (larvae) control of mosquitoes and adult larvae (larvae) should be made in an integrated manner to reduce the population of mosquitoes and followed by monitoring and evaluation measuring the measuring the dense population of adult mosquitoes and larvae. How to make a sample of mosquito mensionia: a. This disease is transmitted through mosquitoes (the main transmitted vector of filariasis in urban areas is from Culex Quinguasciatus and, in rural areas, the vector may be of vain spray Anopheles Cies, like a bearing and a. Bancrofti) that sucks the blood of someone who was already hired earlier. Mansonia Mosquito Morphology 1. Prison was performed sitting with the rolled files at the knee limit. In female mosquitoes, the mouth forms a long probes to penetrate the skin and human animals to suck blood. Fan mosquitoes suck blood to obtain protein for the formation of necessary eggs. Leading around the fish pond using bait. Using anti -mosquito or carrying a mosquito racket before night at night. Mansonia mosquitoes live in nights, located in forest and endemic pine trees, dirty environment and non -fish farms used. Problem formulation 1. Mansonia mosquitoes are aggressive and suck blood when humans are in night activities, especially away from home. Objectives 1. and Materials 1) vacuum cleaners 2) Plastic cups 3) gauze and rubber rubber 4) Human practices as for example b. To find out how to send mosquito samples of Mansonia (3) A. Mansquito Discussion Capture a. How to send mosquito samples of mansonia 1. Working procedures: 1) Provides the equipment first. Loading visueworry, the visualization is currently unavailable. Therefore, to learn more about mosquitoes in this article, we discuss the title of "Mansonia". The types of water can identify the type of mosquito larva that live in it. They lay eggs regularly in holes of water, lagoons, sea water, pannels, waste disposal, lagoons, irrigation by pastures, rainwater lagoons, etc. Therefore, each spirit has environmental requirements for the life cycle maintenance. (SOEDARTO, et al., 1989: 35). (2) Mosquitoes can act as vectors of disease in humans and animals. Big and long body shape 3. How is the way to send a sample of mosquitoes of mansonia? Prevention and control of the mosquitoes of Mansonia 1. 3) So the mosquito larvae that were taken, transferred in a glass of Plastic 4) after it is labeled and then taken to the laboratory to be identified. Mansonia mosquitoes are aggressive and suck blood when humans are in night activities, especially away from home. Siphon ended pointed and dark pigmented (larvae phase) 4. (Levine, 1994). After the mosquito site is labeled. The entrance brought to the laboratory. Mosquito mosquitoes mansquites are associated with pannels, large rivers either the forest or forest, larvae and pupa is attached to their chiffon in the grins of aquatic branches, such as hacint of water, wool , spinach of water and therefore in. Conclusion The conclusions of the discussion of the article above are: (9) branch halis such as hacint of water, wool, kale and so on. How to delineate the samples of mansonia mosquito 1. are in the form, in shape Stopped as a thorn 2. Tool 1) Dipper 2) Plastic glass b. The sample was taken to the laboratory within x 24 hours or the latest in the day. Day.
